CAPA LIGHTING PROGRAM CONTINUES EXPANSION EAGLE EYES JOINS CAPA

Washington D.C. – The Certified Automotive Parts Association (CAPA) announces that Eagle Eyes Traffic Industrial Co., Ltd., a manufacturer of aftermarket lighting, has joined CAPA as a Full Participant.

“Eagle Eyes started working with CAPA in December 2004, and quickly saw the value of our quality requirements for lighting,” said Jack Gillis, Executive Director of the non-profit association. “Competition in the crash parts industry has become critically important in keeping crash repair costs in check and vehicles from being ‘totaled.’ As Eagle Eyes’ parts become certified, they will be making a substantial contribution to both reduced repair costs and improved quality. Eagle Eyes’ participation in CAPA increases the choices for both repairers and consumers.”

Founded in 1979, Eagle Eyes is an international manufacturer of lighting products, and has been supplying parts to the U.S. market since 1993.

“Our mission is to manufacture the highest quality lights to meet the needs of the collision industry and our customers. With CAPA certification Eagle Eyes will have reached this goal,” said Mr. Homy Hsu, Vice Chairman of Eagle Eyes.

“Eagle Eyes is a rapidly growing manufacturer in the U.S. aftermarket lighting industry. By joining CAPA and agreeing to comply with our comprehensive quality standards, they recognize collision repairers’ demand for high-quality, certified aftermarket lighting parts,” said CAPA Executive Director, Jack Gillis.

In order for a part to become CAPA certified, it must be validated through CAPA's independent, third-party testing to determine that it passes FMVSS 108, meets CAPA's requirements for comparability to its car company counterpart and properly fits on a vehicle, within specified guidelines. The Vehicle Test Fit program helps ensure the quality of every CAPA certified part.

The Certified Automotive Parts Association, founded in 1987, is the nation's only independent, non-profit, third party crash parts quality certification organization. CAPA certification identifies, for both consumers and the industry, those parts that meet our high quality standards for fit, form, finish, material content and corrosion resistance.
