Tong Yang Industry Co., Ltd. Approved to Use New CAPA Waterborne Low Volatile Organic Compound (VOC) Primer Label

Washington DC – The Certified Automotive Parts Association, the global leader in aftermarket part certification, recently announced a new labelling program for certified plastic parts, such as bumper covers, that have a waterborne low volatile organic compound (VOC) primer. Tong Yang Industry Co., Ltd., is the first manufacturer in the CAPA program approved to use the new label.

To earn the approval to use the new label, Tong Yang's primer underwent chemical testing for VOC content and was found to be in conformance with SCAQMD Rule 1115 Section 1(C), by the CAPA Validator, Intertek. Their waterborne primer process was also audited.

“We are extremely pleased to be able to use the new CAPA Waterborne Low VOC Primer on our CAPA Certified parts,” said Nick Sun, Assistant Vice President, Tong Yang Industry Co. Ltd. “In addition to showing our parts meet CAPA's comprehensive certification requirements, we can also show our new primer meets industry acceptance criteria for low VOC emissions.”

“Tong Yang has participated in the CAPA Certification program since 1987, and we are happy to be able to support their continued growth with the our Waterborne Low VOC Primer label, stated Debbie Klouser, CAPA Director of Operations.

The Certified Automotive Parts Association, founded in 1987, is the nation's only independent, non-profit, certification organization for automotive crash parts whose sole purpose is to ensure that both consumers and the industry have the means to identify high quality parts via the CAPA Quality Seal. CAPA is an ANSI accredited standards developer for competitive crash repair parts. For more information see CAPAcertified.org.
